

Senolytic Activator

Quercetin-theaflavin blend for cellular health & longevity

Item #02301 • 24 vegetarian capsules

Cellular senescence is a natural part of the aging process in which cells no longer function optimally. These senescent cells can accumulate over time, affecting the day-to-day function of the healthy cells around them.

Tea theaflavins are compounds derived from *Camellia sinensis* (tea plant) that have widespread health benefits. New research indicates these compounds can help manage senescent cell burden: in pre-clinical models, theaflavins helped to powerfully inhibit the accumulation of particular cell-senescence biomarkers.

Quercetin also promotes youthful, healthy cellular activity — and this formulation features our new quercetin phytosome, a phospholipid sphere that encases the quercetin, aiding in its absorption and making it up to 50 times more bioavailable.

Fight back against the effects of cellular senescence with our new Senolytic Activator formula!

Two vegetarian capsules contain:

Bio-Quercetin phytosome 74 mg
(providing 25 mg quercetin [from Japanese sophora concentrate (flower bud)], phosphatidylcholine complex [from sunflower])
Theaflavins 275 mg
[from decaffeinated black tea extract (leaf)]

Other ingredients: vegetable cellulose (capsule), microcrystalline cellulose, vegetable stearate, silica.

Dosage and use:

- Take two (2) capsules once weekly, with or without food, or as recommended by a healthcare practitioner.
